PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience building scalable **microservices**, **distributed systems**, and cloud-native platforms using **Golang**, **Python**, **Docker** and **Kubernetes**. Proven track record of leading cross-functional initiatives that drive user growth, operational efficiency, and platform scalability. Experienced in **control plane–data plane systems**, **system design**, **GenAI-powered workflows**, **CI/CD**, and **observability**, with a strong ability to translate **complex business requirements** into **reliable technical solutions**.

SKILLS

Programming Languages: Python, Golang

Backend Development: Golang, Django, Microservices Architecture, REST APIs, GraphQL, Distributed Systems, Event-Driven Systems (Kafka), Concurrent Programming (Goroutines, channels), gRPC

Cloud & Devops Tools : Docker, Kubernetes, Terraform, AWS, GCP, OCI, GitHub Actions, CI/CD, Grafana

AI / Gen AI : LLM Applications, Prompt Engineering, RAG pipeline, Agentic Workflow, Langchain, Langgraph

Databases : PostgreSQL, MySQL, Redis, NoSQL

Frontend Frameworks: ReactJs, NextJs

Familiar With : Java, ElasticSearch, Object Oriented Programming

EXPERIENCE

Oracle

December 2025 – April 2026

Senior Member of Technical Staff | Golang, Python, Kubernetes, Terraform, AI

Bengaluru, Karnataka

- Rolled out **canary monitoring** for streaming response and ct scaling policy update in **Managed Compute Clusters**, catching performance issues early on **OCI Data Science**.
- **Generated and validated SDKs** (Python, Go, Java) from API specifications, covering **resource lifecycle operations** for compute targets and model deployment.
- **Enhanced Terraform configurations and unit tests** to **ensure** smooth and reliable infrastructure provisioning
- **Working on an MCP server** exposing compute target and model deployment operations to AI agents via standardized tool calling interfaces.
- **Developed an Agentic AI-driven vulnerability remediation workflow** that analyzed **container security** findings, identified upgrade paths, generated fixes using **AI-assisted automation**, and reduced manual on-call effort for **security patch management**.

Razorpay

July 2024 – October 2025

Senior Software Development Engineer | Golang, Python, Kubernetes, PHP, Grafana

Bengaluru, Karnataka

- **Transitioned RazorpayX onboarding** to a **modular framework** utilizing Onboarding-SDK, creating **reusable components** that improved flexibility, speeding up onboarding.
- Built backend integrations in **MOB** leveraging **REST-to-gRPC** communication for internal services, enabling efficient service interactions within the **onboarding platform**.
- **Integrated Salesforce with RazorpayX**, automating **Karza data ingestion** and enhancing sales pipeline visibility, which empowered the sales team with improved lead qualification speed by **40%** across **10,000+ merchant**
- **Migrated merchant setup forms from RSPL to RZPX**, implementing on-demand form generation ensuring full RBI compliance and reducing manual errors by **45%**, with timely delivery under strict timelines.
- **Automated key data tasks via Python scripts**, fixing 6,000+ merchant forms, generating 22,000+ MCC codes using AI, and mapping bank regions with Google Geocoding API—**cutting manual effort by 70%**
- **Led PG cross-sell initiative for RazorpayX**, configuring modular onboarding, driving a **28%** increase in **Monthly Transacting Users (MTUs)** and a **5% uplift** in transaction volume.

- **Implemented Unified Login/Signup (USL)** for RazorpayX, by migrating authentication logic, integrating **REST and GraphQL APIs** to, reducing login-related issues by **15%** and laying the groundwork for **advanced user journey analytics**
- **Built and transitioned** an end-to-end **operational Runbook**, **Mentored engineers** and the PSE team, reducing ObInfra's support load by **35%** and accelerating onboarding resolution time by **25%**

Inkpaper AI

September 2023 – June 2024

Senior Software Engineer | Golang, Django, Generative AI, Docker, Python, GCP

Gurugram, Haryana

- Directed the successful implementation of a **Custom AI Engine**, leveraging **LLama2** and **Anthropic** expertise, in the field of **Generative AI** and **Prompt Engineering**, enhancing document chat capabilities
- Engineered **RAG** search functionality using the **Langchain** framework and **Pinecone Vector DB** to perform accurate vector searches..
- Led development of a **Bulk Upload** capability in **Patent handling software**, facilitating efficient Excel-based processing
- **Deployed Django** project on **GCP** utilizing Compute Engine, Load Balancer, and Firewall rules

AptusDatalabs

June 2021 – August 2023

Software Engineer | Golang, Django, Docker, Kubernetes, React JS, Next JS, Python, AW

Bengaluru, Karnataka

- Developed **cloud-native microservices** using **Golang** and **Django**, deploying applications on **AWS** and built impactful features for **30%** enhanced sales data accuracy and forecasting.
- Improved system performance by **35%** using **Kafka** for Expense Category Classification and **event-driven** architecture
- Engineered **RESTful APIs** and **Kafka** for message handling and data transfer accross applications,thereby improved system performance by **30%**
- Collaborated with other teams and Contributed to **frontend** development in **NextJs** and **ReactJs**, integrating **GraphQL** and **REST APIs** to build responsive dashboards, components and pages.

PROJECTS

Aegis: K8s-Native AI Governance Control Plane | Go, Kubernetes (CRDs),ControlPlane, GenAI, Redis

- Developed a **K8s-native AI governance control plane** in Go, utilizing **custom CRDs**, **operator controllers** and **orchestrator** to enforce runtime agent policies.
- Built a **Go SDK** and an **in-memory runtime repository** to stream metrics, executing a **continuous reconciliation** loop to dynamically **visualize agent drift in a dashboard** .
- Designed a **rule-based governance engine** to calculate dynamic **agent trust scores**, and updating the scorecards.

MatchRank AI: Auto Job Pull & Resume Ranking per JD | Python, Playwright, n8n, AI

- Automated LinkedIn login and 24-hour job scraping using **Playwright**, saving results to CSV based on title queries
- Used **n8n** and **AI** to **score resumes against job descriptions**, generating match ratings and tailored suggestions.

EDUCATION

Silicon Institute of Technology

2017 – 2021

Bachelor of Technology | Computer Science Engineering | 8.9

Bhubaneswar, Odisha

ACHIEVEMENTS AND CERTIFICATIONS

- Participated in over **6+ hackathons**, earning multiple accolades.
- Founded a student club to mentor juniors through technical sessions and knowledge-sharing initiatives
- Certifications:
Google Go Specialization — Anthropic — Kodecloud CKAD — CRIO Externship
- Solved 400+ DSA problems on:
Leetcode — GeeksforGeeks — HackerRank
